June 8, 2017

Prolonged Rain and Flood Watch Advisory

An early notification from Environment and Climate Change Canada forecasts a prolonged rain event beginning this afternoon (Thursday, June 8) over the Peace and Bulkley-Skeena regions of B.C. with rising river levels and potential flooding.

Oil and gas operators are advised that significant flooding is possible. Operators and employees must be prepared to respond to potential impacts to infrastructure.

Rain is expected to continue until at least Friday evening, producing a total rainfall for the 24–36 hour period estimated between 50 and 100 mm, with the highest amounts in the South Peace (including Pine River and Moberly River), along the eastern flanks of the Rocky Mountains, and into the Williston basin. The storm is also expected to extend into the Bulkley and Skeena basins. The rain event, combined with warm air, will accelerate snow melt and increase the potential for high stream flow in a number of areas, including the Pine, Murray, Sukunka, Parsnip, Moberly, Halfway, and Graham river basins, as well as in the Bulkley and Skeena river basins.

Activity in some areas may be limited due to access problems created by weather. The BC Oil and Gas Commission (Commission) encourages operators to evaluate integrity and ensure operational safety as conditions permit.

Should further severe weather and flooding occur, the Commission is recommending all operators inspect their well facilities and pipelines to ensure the operational and structural integrity of their assets is maintained, particularly in areas prone to erosion.

Incidents of damage to assets due to extreme weather should be reported to the Commission through regular incident reporting procedures.

For the latest flood warnings or advisories throughout the province, please check the Commission's [Provincial Emergency Updates](#) for Flooding and River Forecast Resources.
