Dear Sir:

Re: Application for Concurrent Production
 Remington et al N Pine 14-13-85-18 W6
North Pine - North Pine "B"

This refers to your letter of 1986 12 08 requesting information about the concurrent production allowable for the subject well.

In the case of this concurrent production approval, gas production restriction were relaxed to maximize oil and gas recovery from 6-13 before abandonment in early 1987. As 14-13 is classified as an oil well within a concurrent production scheme area, its gas production will continue to be restricted to 14.1 $10^3 \text{ m}^3/\text{d}$. At a future date, when the oil leg is depleted, the well may be reclassified to a gas well and granted a gas allowable.

Yours truly,

K.J. Hindmarch
 Director, Engineering and Operations
