Attention: Mr. D.H. Logan

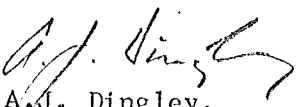

Dear Sir:

Re: Application for Good Engineering Practice
Scurry Ballinderry Cecil 6-12-84-18

This refers to your application of October 10, 1974 concerning the removal of the present MPR and granting of GEP for the subject well.

Although the BHP and production information appear to indicate a small pool, we would prefer to have some additional production history. We realize that with the present MPR and GOR penalty the daily penalised rate would be quite low. Consequently, although we do not approve your application for GEP, we are prepared to allow GOR adjustment factors to be taken from Table 2000 instead of Table 1000. We shall also require bottom hole pressures to be taken from both 6-12-84-18 and 10-18-84-17 after one further year of oil production to attempt to determine if the later is in the gas cap of this oil pool.

Yours very truly,

A.J. Dingley,
Chief Engineer
