

# Application Management System Training

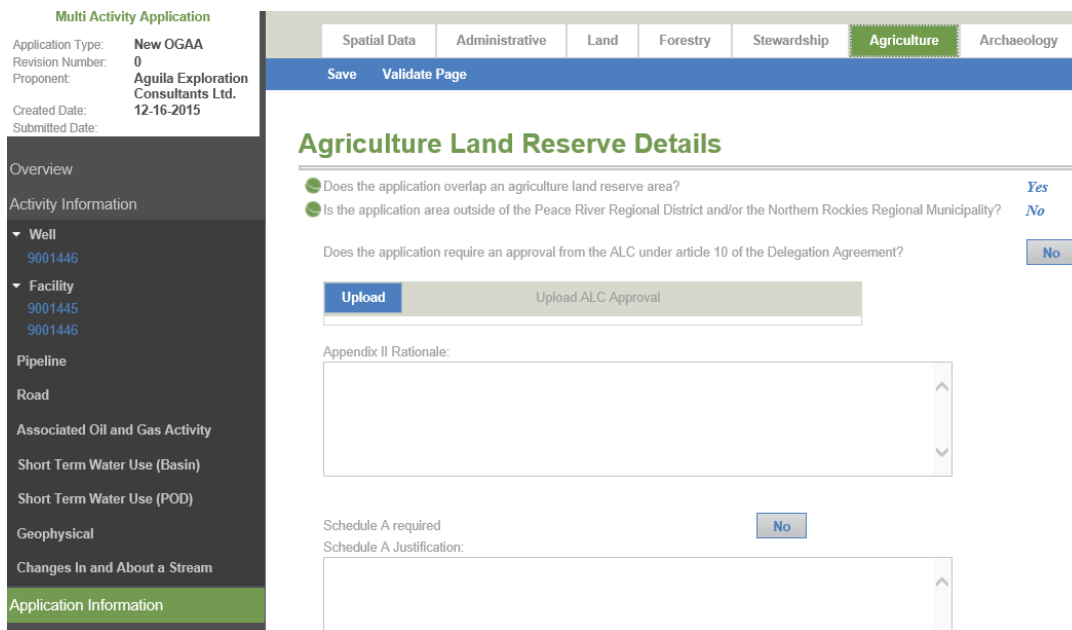

## Completing Agriculture Details

Application information in AMS is a combination of spatially driven data, technical data and administrative data entered into the system. Each application requires details which must be entered by the user. This guide will outline how to input agriculture details into AMS. **For more details see the relevant section in the Oil and Gas Activity Application Manual.**

**PREREQUISITE: Users must have created an application and successfully uploaded spatial data.**

### Step 1. Find Application Information in the navigation panel

In the left hand menu of the Application panel, click *Application Information*. Once clicked, a horizontal tab menu will load indicating what details are required for the selected application.

### Step 2. Click the *Agriculture* tab and complete details

Click on *Agriculture* to load details for applications that overlap the ALR area. If the application does not overlap the ALR area, limited details will be required. Once agriculture details are loaded, complete the fields. Data can be validated at the end of each page to ensure data entered matches business rules. **Please ensure that data is saved before leaving the page.**
