

Application Management System Training

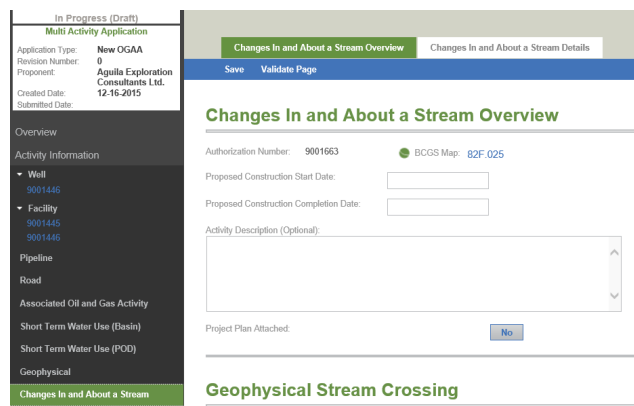

Completing Changes In and About a Stream Information

Application information in AMS is a combination of spatially driven data, technical data and administrative data entered into the system. Each activity requires a set of technical information which must be entered by the user. This guide will outline how to input changes in and about a stream technical information into AMS. **For more details see the relevant section in the Oil and Gas Activity Application Manual.**

PREREQUISITE: Users must have created an application and successfully uploaded spatial data.

Step 1. Find *Changes In and About a Stream* in Activity Information

In the left hand menu of the Application page, under *Activity Information* click the *Changes In and About a Stream* that you would like to enter details for. Once clicked, a horizontal tab menu will load indicating what details are required for the selected changes in and about a stream.

Step 2. Complete technical details

The tabs on the top menu correspond to technical details required for the changes in and about a stream. These do not need to be completed in order, but please save before navigating away from a page otherwise ALL UNSAVED DATA WILL BE LOST. The *Changes In and About a Stream Overview* and *Changes In and About a Stream Details* sections need to be completed for each uploaded changes in and about a stream application. Data can be validated at the end of every page to ensure the data entered matches business rules.

- ***Changes In and About a Stream Overview* section**

This section of the technical details pertains to the application area. All fields are mandatory unless specified *Optional*.

- ***Changes In and About a Stream Details* section**

Complete details for each *Stream Impact* listed either on the bottom of the *Changes In and About a Stream Overview* section or at the top of the *Changes In and About a Stream Details* section to complete the requirements.
