

Expanded Well Data Submission Types in eSubmission

EFFECTIVE DATE: IMMEDIATELY

The BC Oil and Gas Commission is advising operators of new well data submission types that are now accepted through the eSubmission portal.

Effective immediately, operators are required to make the following well data submissions, currently submitted to welldatamail@bcogc.ca, exclusively through eSubmission. These submissions will no longer be accepted via email. They are:

Well Test Data

- Repeat Formation Tests (RFT)

Gas and Fluid Analysis

- Isotope Analysis (ISO)
- Pressure-Volume-Temperature Analysis (PVT)

Additionally, operators will have the option to submit data recorded via surface recorders in CSV format for Transient Pressure and Deliverability Test Surface (TRGS) submissions.

Each submission may contain up to 20 files per submission type and must follow a standard naming convention. Naming conventions can be found in Appendix A of the [eSubmission Portal User Guide](#).

The Drill Comp Prod Rep security role is required to make any well data submission in the eSubmission portal. More details on security roles can be found in the [Company Administration in KERMIT](#) document. More information on eSubmission can be found on the webpage [here](#).
