

Updates to Amendments and Archaeology Submissions in the Application Management System

EFFECTIVE DATE: OCT. 3, 2017

The BC Oil and Gas Commission (Commission) has released a series of updates to the Application Management System (AMS) in 2017 to improve workflow and functionality. This update includes streamlining the process for amending a permit, as well as improvements to submitting archaeology information. An online training session of the system changes will be held on Sept. 27, 2017. This session is free for AMS users but registration is required. Please click [here](#) for more details.

This latest AMS update will be effective at **8am PDT on Oct. 3, 2017** and includes:

- The addition of an Application Amendment Summary tab on the Overview section of the AMS Dashboard. This will display all existing permissioned activity types for that Application Determination (AD) number, and all activity types on the proposed amendment.
- An enhanced amendment application process that allows the addition of new Associated Oil and Gas Activities (AOGA) and National Energy Board (NEB) Ancillaries, Changes In and About a Stream (CIAS), and Short Term Water Use (STWU) submissions without having to amend an existing permitted activity. Effective October 3, these activities will be able to be added by creating a new amendment application.
- Changes to the Archaeology tab to increase the character limit in some of the text boxes. This allows for a more in depth description of planned work in the Archaeology Details and the Non-Geophysical Archaeology Information sections, without the upload of additional attachments.

A system guide that describes all changes to AMS in this update will be posted shortly on the [AMS webpage](#).
