INFORMATION LETTER #OGC 07-01

SUBJECT: UPDATED WELL AND FIELD LOCATION MAPS

The Oil and Gas Commission (OGC) publishes an updated version of the Regional Well and Field Location Map at the beginning of each quarter. The updated version is available during the first week of January, April, July, and October.

The Regional Well and Field Location Map shows the location of wells and oil and gas fields in northeast British Columbia. There are two map files: a north half and a south half. The file format is pdf. The files are available for download free of charge at the OGC website: <http://www.ogc.gov.bc.ca/>.

Access to the map files is via the “OGC Web Applications” section of the website. Clients require a password to enter this area of the website. To obtain a password, click on the “GO” button on the OGC home page, as shown below. A LOGON page then appears and there is a “First time user” link at the bottom of that page.

After entering their password, clients can access the maps by selecting “Data Downloads” from the menu. The two pdf files of the Regional Well and Field Location Maps can be downloaded by clicking on the red filename.
